

Safety Guarding

Pro Ali Design's internal risk assessment determines that the hazard identification, risk estimation and risk evaluation have been adequately assessed and can potentially be further reduced by the client following the Safety of Machinery Guidelines AS/NZS 4024.1100 - 2019.

As the element of risk is perceptive and most companies have their own equipment guarding preferences, Pro Ali Design cannot be held responsible for interpreting the client's actual guarding requirements unless definitive instruction is provided at time of quotation.

Pro Ali Design can, and will, provide additional guarding options as a variation to this quotation/contract following specific guidance of requirements from the client.

For further clarification on the above please contact Jon Ball (02) 4323 2755
